

Olfactory Description: **Perfumery** - Osyrol® is an A&FC speciality product. It has a quite distinctive odour character and offers much more than traditional sandalwood substitutes.

Sandalwood, with a flowery, woody note.

Application Information: **Perfumery** - Recommended for fragrances in which a high quality sandalwood character is required. Blends well with floral compounds such as rose and muguet and is most effective with chypre and woody notes. Has excellent fixative properties and contributes to the overall blending and perfecting of the composition.

Has great potential in luxury fragrances, including those for cosmetics and toiletries, and is also of value in perfumes for soaps and detergents.

Osyrol® has been evaluated in a variety of tests for compatibility, stability of odour and, in the case of aerosols, also for freedom from corrosive effects and clogging of valves. These tests have shown that at the concentrations in which it is normally used, Osyrol® is effective for: Concentrates, alcoholic lotions and toilet waters, perfumed aerosol sprays, antiperspirants and deodorants (lotions and aerosols), cosmetic creams and emulsified lotions, talcum powders, soaps, shampoos, bubble baths, detergents and fabric softeners.

Use Level: 20%

Substantivity: 72 hours

GC Analysis:	Typical
Osyrol®	99.0%

Visual Description: Clear, almost colourless liquid.

Density at 20°C (gm/ml): 0.899 - 0.902

Refractive Index (NaD 20°C): 1.446 - 1.448

Flash Point (closed cup): >100°C
